### Python Developer

A systematic, organized, hardworking and dedicated professional with an analytical bent of mind with good academic credentials, having 5-years of experience in the field of Python (with Machine Learning) as a developer. Currently working on **Python with Machine Learning**. Well-groomed to explore a suitable professional position where he can contribute towards providing effective solutions regarding the trends in modern IT Industry.

Worked as a developer in MNCs. Having worked over on Python as a basic developer and used the concept of NLTK and ML along with Flask to successfully complete a project on Internship. The project was based on making an Autonomous Chat Bot System with Natural Language Processing that could repair itself.

Recent projects done on ML is Automatics Car License Number Plate Recognition System, which store the car number in text formats into a Database and takes in Images through FTP

Currently learning the same technology to learn and implement the concepts of python with data science.

Believes in “*AI is the future of the world*”. The more we analyze our data, the more developed being we become to predict our future as we know our past holds us where we are or what we become.
